

# INTEGRATED CHALLENGES STRATEGY

**Integrated Fire Management (IFM)** seeks to harness the ecological benefits of wildfires while minimising the damage they can cause to communities, infrastructure, and natural resources.

The views on fire management and governance have evolved towards a **more comprehensive and holistic approach**. As a result, IFM integrates the **entire fire cycle and its different components** of 1) Prevention & Preparedness; 2) Detection & Response; 3) Adaptation & Restoration.

Through collaboration among stakeholders and **adopting a proactive approach and innovative strategies**, IFM can lead to long-term resilient ecosystems, reduced risks to human life and property, and sustainable land management practice.

## LIVING LAB VOICES - WISHLIST

### Mobilise resources for effective action

- WUI assessment and management
- Reduce fuel loads and ignition risk at the WUI

### Risk communication and awareness

- An efficient and up-to-date tool informing citizens of daily fire risk
- Communicating daily risks to tourists and floating population

### Collaborative and participatory approaches in wildfire risk management

- Innovative tools to enforce fuel reduction at WUI and around other infrastructure

## WHAT NEEDS TO BE OVERCOME?

### CHALLENGES

### OBJECTIVES ACTIONS BENEFICIARIES
