

INTEGRATED CHALLENGES STRATEGY

Integrated Fire Management (IFM) seeks to harness the ecological benefits of wildfires while minimising the damage they can cause to communities, infrastructure, and natural resources.

The views on fire management and governance have evolved towards a **more comprehensive and holistic approach**. As a result, IFM integrates the **entire fire cycle and its different components** of 1) Prevention & Preparedness; 2) Detection & Response; 3) Adaptation & Restoration.

Through collaboration among stakeholders and **adopting a proactive approach and innovative strategies**, IFM can lead to long-term resilient ecosystems, reduced risks to human life and property, and sustainable land management practice.

LIVING LAB VOICES - WISHLIST

Collaborative and participatory approaches in wildfire risk management

- Multiactor collaboration through platforms
- Toolkit for embedding wildfire risk in land planning

Coherent multiactor wildfire governance

- Full government ownership (cross department collaboration)

Risk communication and awareness

- Risk communication for policy makers

Mobilise resources for effective action

- Reversing land abandonment through socio-economic activation

WHAT NEEDS TO BE OVERCOME?

Monte Arci -Usellus

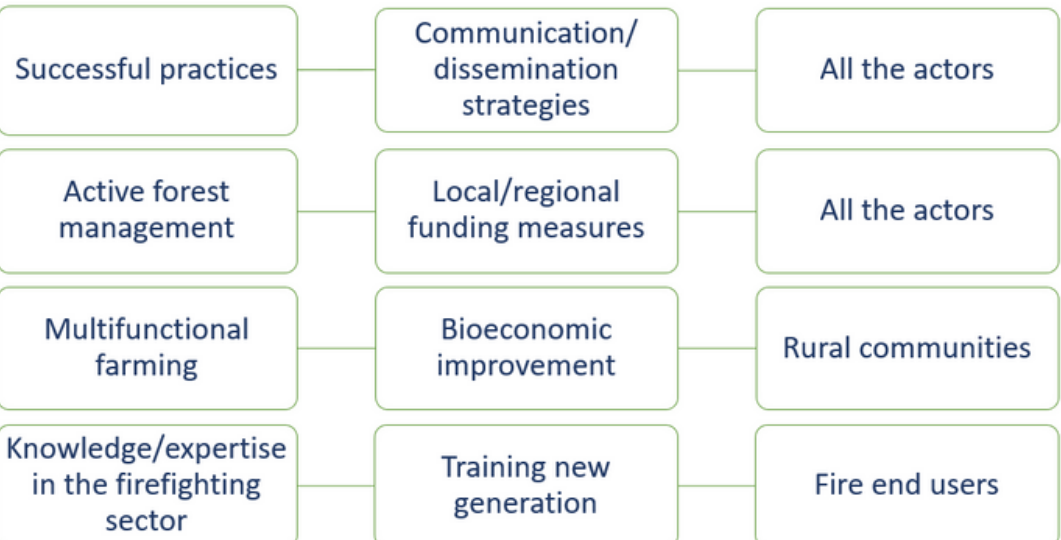

OBJECTIVES

ACTIONS

BENEFICIARIES

Prevention & preparedness

INTEGRATED CHALLENGES STRATEGY

Mapping the stakeholders involved in IFM helps identify their interests, roles, and potential contributions to wildfire management efforts. However, it should be complemented by a comprehensive approach that includes adequate resources for fire agencies, advanced technology for fire detection and suppression, research on fire behaviour and ecology. Also, collaboration between stakeholders, including government agencies, communities, and environmental organisations. These key principles contribute to building more resilient communities and ecosystems in the face of wildfire challenges.

LIVING LAB VOICES - WISHLIST

Understanding the risk

- Tools to assess risk in Natura 2000 network

Safe and improved early attack and suppression

- Training for response & new funding mechanisms for post fire resilient restoration

Smarter post-fire restoration and recovery

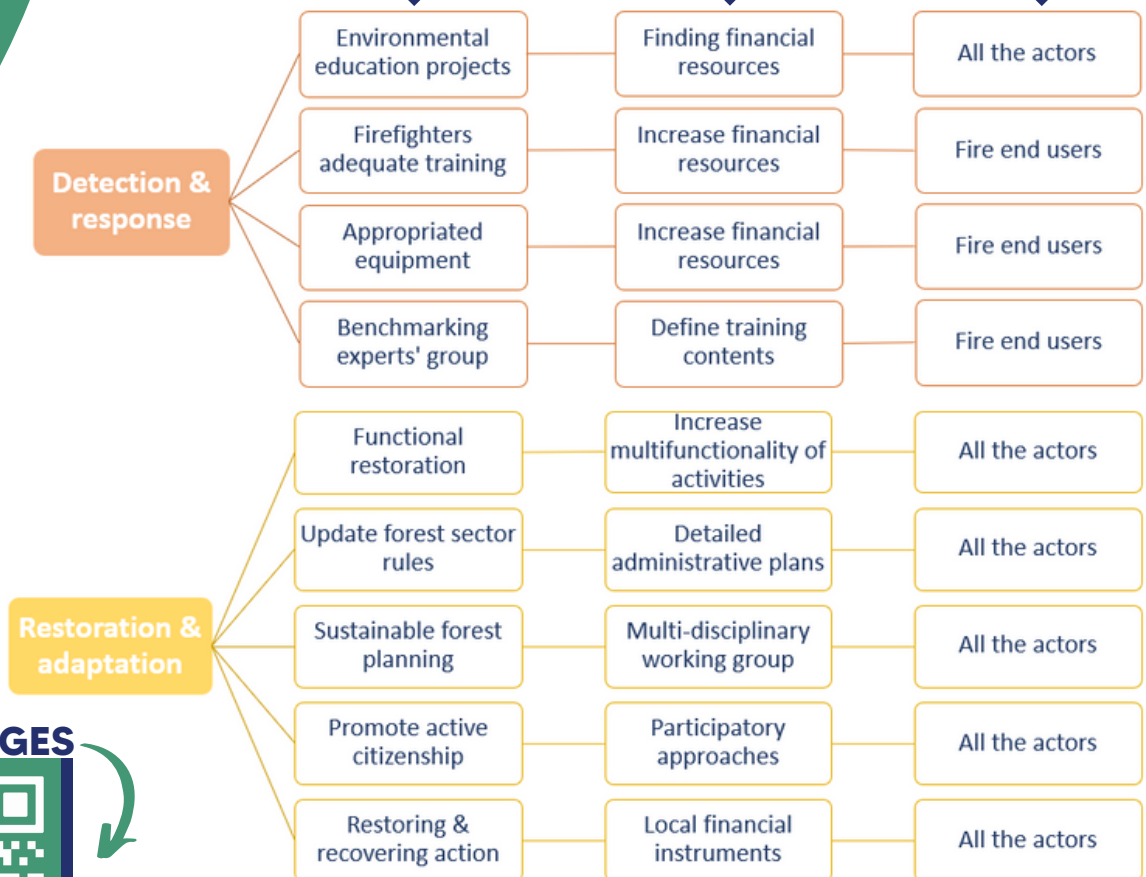

- Integrated Fire Management: embedding long term resilience in post-fire management
- Decision support tools for "smart" forest fire restoration

Monte Arci -Usellus

INTEGRATED CHALLENGES STRATEGY

Integrated Fire Management (IFM) seeks to harness the ecological benefits of wildfires while minimising the damage they can cause to communities, infrastructure, and natural resources. The views on fire management and governance have evolved towards a more comprehensive and holistic approach.

As a result, IFM integrates the entire fire cycle and its different components of 1) Prevention & Preparedness; 2) Detection & Response; 3) Adaptation & Restoration.

Through collaboration among stakeholders and the application of proactive approaches and innovative strategies, IFM can lead to more and long-term resilient ecosystems, reduced risks to human life and property, and sustainable land management practice.

LIVING LAB VOICES - WISHLIST

Collaborative and Participatory approaches in wildfire risk management

- Multiactor collaboration through platforms
- Toolkit for embedding wildfire risk in land planning

Coherent multiactor wildfire Governance

- Full government ownership (Cross department collaboration)

Risk Communication and awareness

- Risk communication for policy makers

INTEGRATED CHALLENGES STRATEGY

Mapping the stakeholders involved in IFM helps identify their interests, roles, and potential contributions to wildfire management efforts. However, it should be complemented by a comprehensive approach that includes adequate resources for fire agencies, advanced technology for fire detection and suppression, research on fire behaviour and ecology. Also, collaboration between various stakeholders, including government agencies, communities, and environmental organisations.

These key principles contribute to building more resilient communities and ecosystems in the face of wildfire challenges.

LIVING LAB VOICES - WISHLIST

Monitoring, forecast and modeling for decision support

- Tools to assess risk in Natura 2000 network

Mobilise resources for effective action

- New funding mechanisms for post fire resilient restoration

Better build back

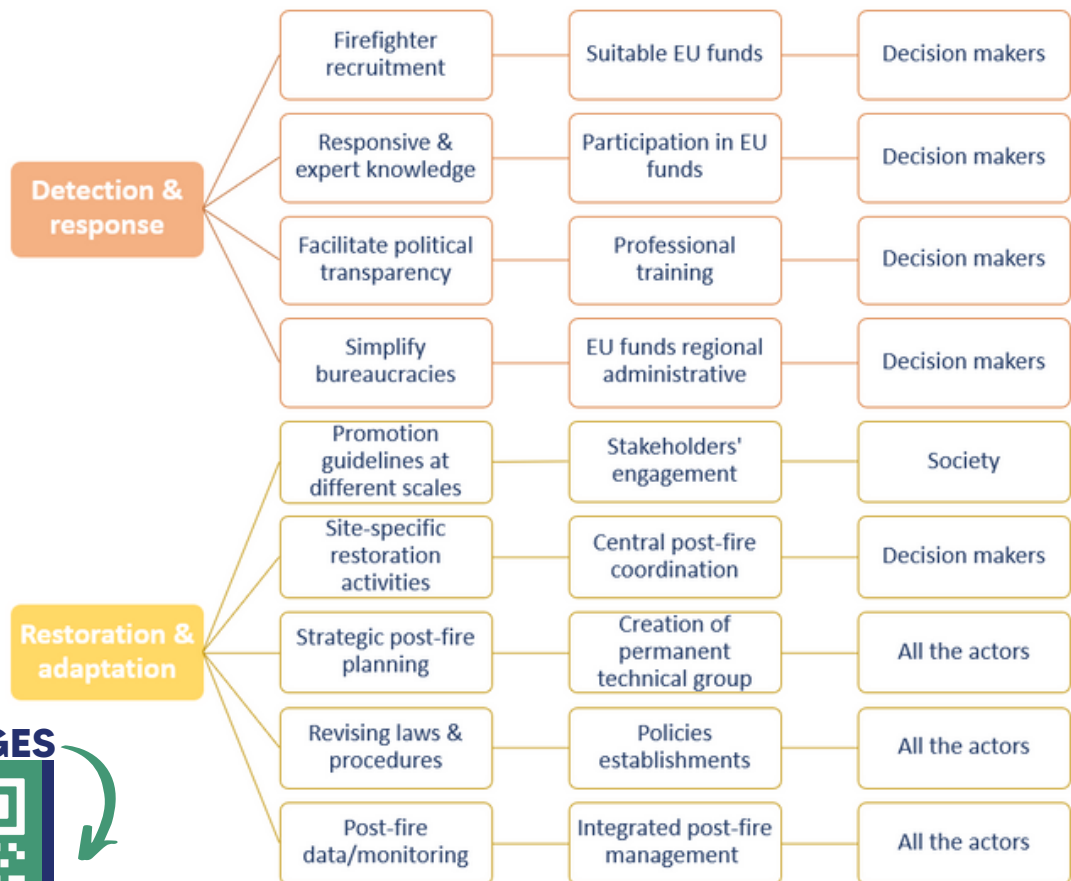

- Integrated Fire Management: embedding long term resilience in post-fire management
- Decision support tools for "smart" forest fire restoration
